Eight Rounds of Data

Round	Topic	Proposals	Votes
1	Design and development of future cities	**Agent Alex**: Considering my role as an urban planner and technology innovator focused on sustainable city design, I propose a comprehensive approach that integrates smart technologies with green infrastructure in future cities. This includes the development of energy-efficient buildings, renewable energy sources, and advanced transportation systems to reduce carbon emissions. Additionally, my proposal emphasizes community engagement and participatory planning processes to ensure that the needs and values of residents are reflected in urban design decisions. By leveraging cutting-edge technology while prioritizing sustainability and inclusivity, we can create resilient cities that thrive economically, socially, and environmentally for generations to come.	
	Agent Sally: Based on Sally's multifaceted relationship with Urban Planning/Urban Development Initiatives, her best proposal for the Design and Development of Future Cities would be a comprehensive framework that integrates sustainable practices, technological advancements, and community engagement. This framework should
